The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 4 and 6 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JAPANESE DISCLOSURE NUMBER 5-302288 (translation used for rejection).

JAPANESE DISCLOSURE NUMBER 5-302288 teaches pretreating mechanical pulp (e.g. ground or refined pulp) before bleaching to eliminate the polyvalent metal ions (chelate) which have an adverse effect on peroxide bleaching (page 5, paragraphs 0002-0006). JAPANESE DISCLOSURE NUMBER 5-302288 lists many chelating agents including organic sulfides (see equations on pages 2, 3, 5 and polymers listed on pages 5-8) including dithiocarbamates (paragraph 0012). If necessary, it would have been obvious that the mechanical pulp of JAPANESE DISCLOSURE NUMBER 5-302288 is ground or refined as all mechanical pulp is made by grinding or refining. Any difference between the claimed chelating agents and the chelating agents of JAPANESE DISCLOSURE NUMBER 5-302288 would have been obvious modifications of the chelating agents of JAPANESE DISCLOSURE NUMBER 5-302288. See paragraph 0030, for 0.04-0.8% chelating agent dry pulp. If necessary obvious to

adjust the amount of chelating agent depending upon the amount type of pulp used, and/or depending upon the amount of polyvalent metal ions in the pulp.

Claims 2, 4 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "about 0.002 weight % to about 0.02 weight %" is indefinite. It is not clear if this is weight percent of the slurry or dry pulp.
